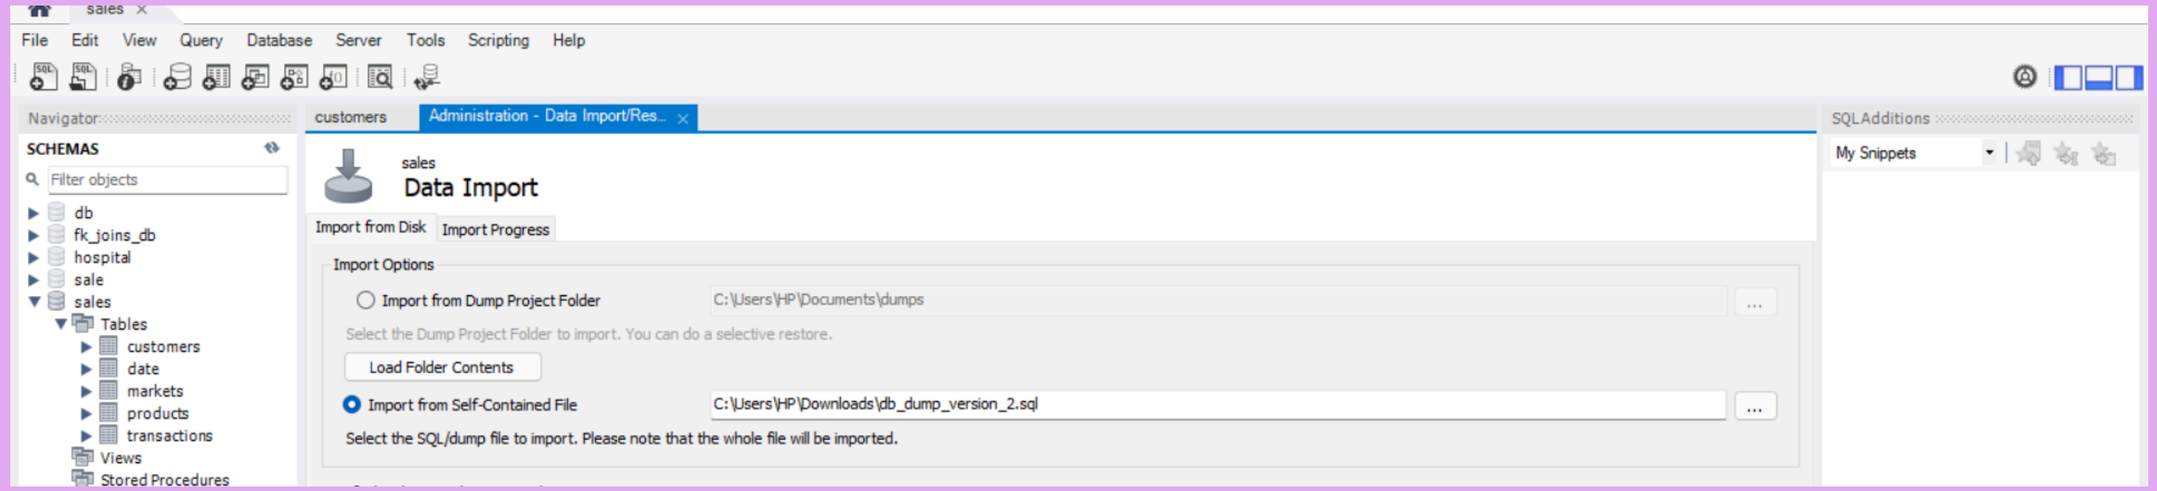
Project Overview

The Atliq Sales Insights Project is a data analysis project focused on extracting meaningful business insights from sales data using SQL. The goal is to help stakeholders make data-driven decisions by analyzing revenue trends, customer behavior, and market performance.
This project simulates a real-world business scenario where a company (Atliq Hardware) operates across multiple markets and deals with large volumes of transactional data.

Data Importing Into MYSQL



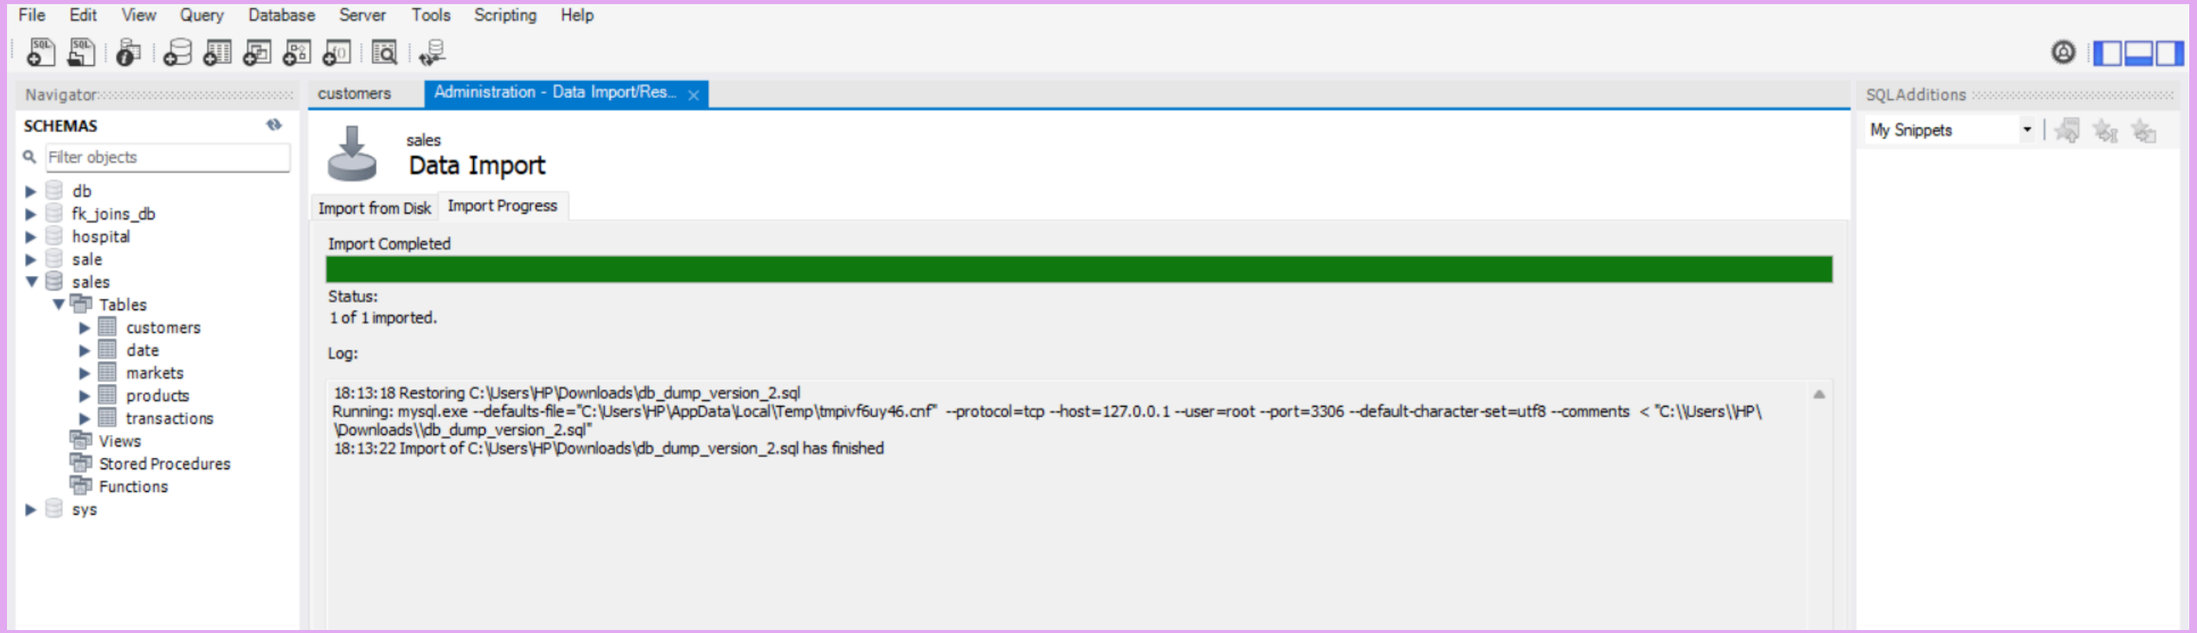


Table Creation

```
CREATE TABLE `date` (
  `date` date NOT NULL,
  `cy_date` date DEFAULT NULL,
  `year` int DEFAULT NULL,
  `month_name` varchar(45) DEFAULT NULL,
  `date_yy_mmm` varchar(45) DEFAULT NULL,
  PRIMARY KEY (`date`)
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4 COLLATE=utf8mb4_0900_ai_
```

```
CREATE TABLE `markets` (
  `markets_code` varchar(45) NOT NULL,
  `markets_name` varchar(45) DEFAULT NULL,
  `zone` varchar(45) DEFAULT NULL,
  PRIMARY KEY (`markets_code`)
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4 COLLATE=utf8
```

```
CREATE TABLE `products` (
  `product_code` varchar(45) NOT NULL,
  `product_type` varchar(45) DEFAULT NULL,
  PRIMARY KEY (`product_code`)
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4 COLLATE=utf8mb4_0900_ai_ci;
```

```
CREATE TABLE `customers` (
  `customer_code` varchar(45) NOT NULL,
  `custmer_name` varchar(45) DEFAULT NULL,
  `customer_type` varchar(45) DEFAULT NULL,
  PRIMARY KEY (`customer_code`)
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4 COLLATE=utf8mb4_0900_ai_ci;
```

Top 5 Customers by Revenue

```
select c.custmer_name,sum(s.sales_amount) as total_revenue
from transactions s join customers c
on s.customer_code = c.customer_code
group by c.custmer_name
order by total_revenue desc
limit 5;
```

custmer_name	Total_revenue
Electricalsara Stores	413333588
Electricalslytical	49644189
Excel Stores	49115620
Premium Stores	44906666
Nixon	43893083

Revenue By product Type

```
select p.product_type,sum(s.sales_amount) as total_revenue
from transactions s join products p
on p.product_code = s.product_code
group by p.product_type
order by total_revenue desc
limit 5;
```

product_type	total_revenue
Own Brand	369812648
Distribution	146039576

Product Code By revenue

```
select p.product_code,sum(s.sales_amount) as total_revenue
from transactions s join products p
on p.product_code = s.product_code
group by p.product_code
order by total_revenue desc
limit 5;
```

Result Grid | Filter Rows:

product_code	total_revenue
Prod040	23581969
Prod159	17660106
Prod065	16259345
Prod018	15597920
Prod053	15135392

Revenue Trend By Date

```
select d.cy_date,sum(s.sales_amount) as total_revenue
from transactions s join date d
on d.date = s.order_date
group by order_date;
```

Result Grid Filter Rows:

cy_date	total_revenue
2017-10-01	1134710
2017-10-01	1977453
2017-10-01	1276971
2017-11-01	2782388
2018-03-01	1540195
2018-03-01	1803091

Sum Of Total Transactions

```
SELECT SUM(sales.transactions.sales_amount) FROM sales.transactions
INNER JOIN sales.date ON sales.transactions.order_date=sales.date.date
where sales.date.year=2020 and sales.transactions.market_code="Mark001";
```

Result Grid Filter Rows:

	SUM(sales.transactions.sales_amount)
▶	2463024

Revenue contribution % By region

```sql
SELECT
    m.markets_name,
    SUM(t.sales_amount) AS revenue,
    ROUND(SUM(t.sales_amount) / (SELECT SUM(sales_amount) FROM sales.transactions) * 100, 2) AS revenue_contribution_pct
FROM sales.transactions t
JOIN sales.markets m ON t.market_code = m.markets_code
GROUP BY m.markets_name
ORDER BY revenue DESC;
```

Result Grid | Filter Rows: | Export:

markets_name	revenue	revenue_contribution_pct
Delhi NCR	519514271	52.75
Mumbai	150084801	15.24
Ahmedabad	132307441	13.43
Bhopal	58609861	5.95
Nagpur	55026321	5.59
Kochi	18813466	1.91
Chennai	18042702	1.83
